Summary

Full-Stack Developer (MERN) and 2026 B.Tech graduate building REST API-driven apps with React.js, Node.js, MongoDB, SQL, and JWT authentication; recent work on a serverless stack (Cloudflare Workers, SQL, object storage). 250+ LeetCode problems solved in C++. Seeking a Software Engineer, SDE-1, or Associate Software Engineer role.

Technical Skills

Languages: C++, JavaScript, SQL, HTML5, CSS3

Frontend: React.js, Redux, Tailwind CSS, EJS, Responsive Web Design, Motion (Framer Motion), Vite

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Session Management, Passport.js, MVC Architecture

Databases: MongoDB, MySQL, SQLite, CRUD Operations

Tools & Platforms: Git, GitHub, Cloudflare (Workers, D1, R2), Cloudinary, Hoppscotch, Render, Vercel

Concepts: Data Structures & Algorithms, OOP, SDLC, Unit Testing, Debugging, Web Security (Authentication/Session)

Experience

Primrose Sphere Tech Pvt. Ltd.

Remote

Full Stack Developer Intern

June 2026 - Present

- Built incremental Gmail sync for a serverless goal-tracking app, indexing metadata in SQL and raw emails in object storage; chose a timestamp cursor over Gmail's history ID, which expires weekly and drops mail after any sync gap.
- Fixed a data-loss bug in already-merged code where the sync cursor advanced past emails the batch never fetched, silently skipping them with no error surfaced; held the cursor until batch completion and added a regression test.
- Shipped file attachments via pre-signed URL uploads direct to object storage, recording the storage key and metadata in SQL as the source of truth for file lookup.

IBM SkillsBuild

Remote

Frontend Web Developer Trainee

June 2024 - August 2024

- Built **Agency-AI**, a responsive digital agency website with React.js, Vite, and Tailwind CSS on Vercel.
- Implemented a dark/light theme toggle, lifting state to the parent and passing via props across 10+ components.
- Integrated scroll-based animations with the Motion library for a smooth experience on all screen sizes.

Projects

WanderLust - Travel Listing Web App | Node.js, Express.js, MongoDB, EJS | GitHub | Live

Jan 2025

- Developed a full-stack travel listing platform using Node.js, Express.js, MongoDB, and EJS following MVC architecture, with 10+ CRUD routes built on RESTful API design supporting 50+ active listings.
- Implemented secure user authentication and role-based authorization using Passport.js and session management, protecting all write operations from unauthenticated access.
- Integrated Cloudinary for cloud-based image uploads, enhancing listings with visual media support.

AI Thumbnail Generator - AI-Powered Web App | React.js, Node.js, Express.js, MongoDB

Nov 2025

- Built a full-stack AI web application on the MERN stack that generates custom thumbnails from user text prompts via an external AI API.
- Designed and implemented 5+ RESTful API endpoints for prompt submission, image generation, retrieval, and deletion with structured error handling and correct HTTP status codes.
- Stored AI-generated image metadata and prompt history in MongoDB, enabling users to retrieve and manage past generations.

Education

University School of Information, Communication & Technology (USICT, GGSIPU)

Delhi, India

B.Tech in Electronics & Communication Engineering

Nov 2022 - May 2026

CGPA: 7.33 / 10

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP

Achievements

DSA & Problem Solving: Solved 250+ problems on LeetCode in C++ across arrays, strings, binary search, hashing, linked lists, and recursion & backtracking.

Leadership: Head of the Training & Placement Cell at USICT (2023-24); coordinated with 10+ recruiters and led placement readiness drives for 200+ students.
